

Two sections, made to earn their space.

A tight critique and hi-fi redesign proposal for **Podrška** and **Edukacija** only — the two homepage bands that currently read as thin. Same dark cinematic system, same red-as-signal rule. Nothing else on the site is touched.

2-3 DIRECTIONS PER SECTION

WIREFRAME • RATIONALE • CODEX NOTES

REUSES EXISTING TOKENS

Scope locked • header, hero, Program Deck, katalog and product pages are out of scope by request.

01

Critique — what's thin

02

Support — 3 directions

03

Knowledge — 3 directions

04

Codex handoff notes

01 — THE CRITIQUE

Both sections say the right thing quietly, in a room built for volume.

The copy is good and the intent is clear. The problem is structural: neither band has a strong reason for its shape. Support leans on one decorative console; Knowledge is a scroll strip that literally cuts a card in half. In a dark cinematic layout, thin structure reads as **unfinished**, not minimal.

SUPPORT • CURRENT

One prop is carrying the whole band

- The three services (mešanje boja, tehnička, komercijalna) are a plain bullet list with faint square icons — they read as fine print, not as the offer.
- The mix console is the only strong object, so the section becomes "a color widget" rather than "three ways we back you up".
- Heading, bullets and CTA sit in one soft column with even weight — no clear first thing to read, no obvious action.
- Nothing signals trust: no proof, no named commitment, no "a human answers".

KNOWLEDGE • CURRENT

A shelf of look-alike cards, half of one hidden

- Horizontal scroll clips the last card mid-width — reads as a bug, not an invitation to scroll.
- Five identical cards, no hierarchy: nothing says "start here", nothing feels editorial or premium.
- Category label - title - read-time is the right data, but flat type and no imagery make each card interchangeable.
- "Sve teme" links to the contact form, and every card links to the same place — the section promises content it doesn't yet route to.

Neither fix needs new infrastructure. Both are layout + hierarchy changes inside the existing dark system, the existing tokens, and the copy you already wrote.

02 — SUPPORT • "PODRŠKA KOJA REŠAVA PROBLEM"

Make the three kinds of help the structure — not a footnote.

Every direction pins the section to the same job: communicate **mešanje boja, tehnička podrška** and **komercijalna podrška** as three equally real services, add a trust signal, and end in one clear action. The mix console stops being decoration and becomes proof.

SUPPORT • A

Three-pillar utility rail

Console demoted to a proof strip; the three services become the spine.

WIREFRAME

Heading + lead in one top row → 3 equal service cards → single proof+CTA bar. One column of reading, then one action.

WHY

Three cards give the section body and make each service feel like a real capability. The console becomes evidence for card 01, not the whole story.

FEEL

Each card carries a small mono commitment (ΔE, response time, named contact). Concrete promises read as utility, not marketing.

SUPPORT • B

Console-led, proof-forward

Keep the split, but fix hierarchy and turn the console into a credibility anchor.

WIREFRAME

Left: heading → numbered service list → primary + text CTA. Right: elevated console with ΔE headline and a "repeatable formula" line.

WHY

Closest to today, lowest build risk. Numbered dividers give the list authority; the ΔE number becomes the trust proof instead of a decorative widget.

TRADE-OFF

Still leans on the console visually. Best if color-matching is the single thing you most want buyers to remember.

SUPPORT • C

Full-bleed technical band

Statement heading over a hairline data strip; three services as a grid footer.

WIREFRAME

Statement band (heading + lead + CTA + hairline metric strip) sitting on a three-tile service footer that spans full width.

WHY

Most cinematic and most "trust". The metric strip reads like a spec sheet — utility, not fluff — and the section fills the width confidently.

TRADE-OFF

Drops the literal console. Keep only if the ΔE proof lives elsewhere (e.g., on a support page) — otherwise pair with A's proof bar.

03 — KNOWLEDGE • "ZNAJBE KOJE PRAVI RAZLIKU"

Make it read like a workshop journal, not a card shelf.

The audience should understand in one glance: **this is practical advice for the lakirnica**. Every direction gives the topics hierarchy, kills the half-cut card, and adds editorial weight — category, title, read-time and a real destination.

KNOWLEDGE • A

Featured lead + supporting grid

One hero topic, then a clean 2+2 — magazine hierarchy, no scroll cutoff.

WIREFRAME

Header row (title + "Sve teme" pill) → featured card with image (left) + 2+2 text cards (right). Fixed grid, everything visible.

WHY

The featured card creates hierarchy and instantly signals "editorial content". One image is enough to make the whole band feel premium.

FEEL

Reads like a trade magazine cover story + related reads. Most premium of the three; needs one hero image per rotation.

KNOWLEDGE • B

Numbered editorial index

Big index numbers, category, title, read-time — a technical journal contents page.

WIREFRAME

Header row → 3-col grid (2 rows); 5 topic cards with image tops → a dashed "Sve teme" tile closing the grid.

WHY

Zero images required, zero cutoff, scales to any number of topics. The numbering reads as a curated syllabus — authoritative and technical.

FEEL

Lowest effort, lowest risk, ships without photography. Best interim while real article images are produced.

KNOWLEDGE • C

Contained editorial grid

All topics in a fixed responsive grid with image tops — no scroll, uniform premium cards.

WIREFRAME

Header row → 3-col grid (2 rows); 5 topic cards with image tops → a dashed "Sve teme" tile closing the grid.

WHY

Fixes the cutoff by design — the grid wraps instead of scrolling. Uniform cards look intentional; the CTA tile makes the last cell purposeful, not empty.

FEEL

Closest to current cards but resolved. Needs a small image per topic; falls back gracefully to a tint if an image is missing.

04 — CODEX HANDOFF

Two section swaps, no new infrastructure.

Both changes live entirely inside `CarsystemHomePage.tsx` and its module CSS. Existing tokens cover every color; no data-model, routing or component-library changes are required.

SUPPORT SECTION • #PODRSKA

Replace `.supportList` (bullet list) with a 3-item array, collapsing to 1-col under 720px. Keep the existing 3-tuple columns: `repeat(3, 1fr)`. Add a third field for the mono commitment line.

Cards use existing tokens: `var(--bg, var(--border), radius 14px, icon chip=36-48px, red tint for "Mešanje", steel -- ) for the other two.`

Direction move `.mixConsole` content into a single horizontal proof bar (color chip + name + ΔE + CTA). Direction keep `.supportGrid` split, restyle list as numbered rows, elevate console, add "repeatable formula" caption.

Enforce one primary CTA (red) — `/kontakt?tema=tehnicka-podrska`. Any secondary ("Pronadi komercijalistu") is a text link, not a second fill.

Heading stays `h2#support-title`; each pill title is an `h3` for outline/SEO.

KNOWLEDGE SECTION • #EDUKACIJA

Replace `.educationRow` (overflow-x: scroll) with `.educationIndex` — flex column x of rows, no snap. Dir CSS `repeat(3, 1fr) → repeat(2, 1fr) → 1-col, A/C: grid.`

Delete the fixed `16x0 0 clamp(260px, 380px, 340px)` card width and `scroll-snap-type` — that width is what causes the half-cut card.

Extend `.educationItems` with `slug + image`; point cards at real article routes (e.g. `/saveti/{slug}`) instead of the shared contact link. If routes aren't ready, keep contact link but plan the slug now.

Dir first item renders as a featured card (image + larger title, spans one grid column, full A: height) with the rest in a nested 2x2. Dir uniform cards + a trailing dashed "Sve teme" tile to fill the grid cleanly.

Image tops use the striped placeholder component until real photography lands; fall back to a flat #181319 tint when no image. Keep read-time in --font-technical mono.

GUARDRAILS

Red only on the single primary CTA, the "Izdvojeno"/featured badge, and category eyebrow. Everything structural stays neutral + steel. No new fonts, no radial glows, no second red fill per block. Verify mobile: support pillars stack, knowledge grid drops to 1-col, both keep ≥44px tap targets.
